About me

In my journey as a Front-end Developer, I've built a strong foundation in React and React Native through diverse experiences, including specialized courses, freelance work, and personal projects. Currently operating as a solopreneur, I've gained insights into project management and entrepreneurship. Moving forward, I aim to transition into a team environment, leveraging my expertise to contribute to collaborative projects while continuously learning from my peers. My goal is to be an integral part of a development team, combining my skills in responsive interface design with the collective knowledge of a collaborative setting to further my growth in the technology industry.

Skills

- HTML, CSS, JavaScript.
- TypeScript.
- React & React Native.
- Next.
- Redux.
- SQL.
- [English C2 \(Proficient\)](#).
- Git & Github.
- Wordpress.
- Node.
- Express.
- Sequelize.
- Docker.
- Firebase, Supabase.

Experience

- [TinyTales: Create Short Stories](#)

TinyTales is a freemium multiplatform mobile app that offers an easy way to create kids stories effortlessly using AI, and also provides a library where you can find hand picked classic short stories. It could be used for parents, teachers or storytellers. It was built using React Native, Node, Express, SQL and openai API.

- [Ship SaaS Fast](#)

A NextJs repo boilerplate that allows you to build and ship a SaaS the fastest way possible. It offers Next - Typescript, Supabase for DB and Auth, Redux for state management, Stripe for payments, Tailwind - SwiftUI for styles and Resend for emails.

- [3d Lading Page](#)

Stunning landing page with graphics on the web built with three js, react three fiber and blender.

- [The Walking Dog](#)

I developed the Walking Dog App, a platform for scheduling pet walks, using React and C#. I worked collaboratively with a team of 6 people, contributing my frontend development skills to ensure an attractive and user-friendly interface.

- [B-Stage](#)

I collaborated with a team of three people in the development of a mobile application using React Native, with the aim of helping artists to find jobs in their field. The application included important features such as the ability to search and apply for jobs directly through the platform, as well as the possibility for artists to attend castings and have their experience validated by companies.

- **Fajada Co**

I developed an e-commerce website using WordPress for a clothing brand specialized in manufacturing shapewear. The project included implementing a modern and attractive design as well as integrating key functionalities for the success of the business, such as inventory management and payment processing. I worked closely with the company's team to ensure that the website met their specific objectives and requirements.

- **En Su Santo Lugar** - <https://ensusantolugar.mx/> - <https://ensusantolugar.co/>

I developed an e-commerce website for a houseware store with a presence in Mexico and Colombia. The project was based on WordPress, which allowed for a modern design and customized functionalities for the business, such as inventory management and payment processing in different currencies. I worked closely with the company's team to ensure that the website met its online sales objectives, including setting up different shipping options and complying with legal requirements in each country.

- **Footbollify**

I collaborated with a team of 5 people to develop an app for the Qatar 2022 Hackathon, using React and Flask. The app was designed to allow users to view match results, bet on their favorite team, and compete with friends and other users. The project involved implementing an attractive user interface and key features, such as the integration of a secure payment system and a user rating system. We worked closely throughout the development process to ensure that the app met the needs and expectations of users and the hackathon itself

Education

Coderhouse, Web Development - MAY 2022

Coderhouse, JavaScript - JULY 2022

Coderhouse, React.js - OCTOBER 2022

Platzi, JavaScript - OCTOBER 2022

Platzi, Animations with CSS - OCTOBER 2022

Platzi, React - OCTOBER 2022
